

Homework 3: Statistics in the Real World

You are welcome to work in groups for this homework, but every member must submit their own assignment, and all group members must be listed.

1. This [linked article](#)
2. [Download linked article](#)
3. talks about the effects of researcher bias on analysis. Answer the following questions.
 1. Summarize the article in a few sentences.
 2. The author has her own biases. What are they?
 3. We have discussed the impacts of various kinds of statistical bad behavior. Discuss what kinds of bad behavior are on display here.
4. This [linked article](#)
5. [Download linked article](#)
6. discusses an entirely different set of statistical bad behavior. Answer the following questions.
 1. Summarize the article in a few sentences.
 2. This article details the “slippery slope” from questionable behavior in order to get publications to truly unethical behavior. This is the primary reason I cover these things so heavily in class- 1) so you recognize them as bad behavior, and 2) so you can set your own ethical guidelines and responses before you face the dilemma. Consider the problems described. What solutions can you imagine that would counter those pressures? How might researchers have ethically searched for positive results?
