

Directions: Is Sami playing with loaded dice?!

1. Get into 13 groups
2. Each group will be assigned a group number
3. Open the google sheet for your class time and choose the tab at the bottom with your group number
4. Enter the name of your group members (first and last) in the first row as indicated
5. Enter the name of the dice you are given
6. As a group, choose which dice you will test
7. Write your hypothesis
8. Decide how many trials you will need to have at least 5 observations expected in 80% of the cells
9. Enter your expected (think—the dice should be unbiased, so the expected should be the number of trials/number of side on the dice
10. Use the link in the module to calculate your chi-square
11. What are the results?
